RE: Option of Pharmacy Warfarin Dosing in EPIC

Searching for **warfarin** in EPIC you will see the following:

Warfarin (COUMADIN) ✓ Accept

- warfarin (COUMADIN) - Pharmacy to Dose
- warfarin (COUMADIN) - Provider to Dose
- enoxaparin bridging + warfarin (Provider to Dose)

ⓘ Next Required ✓ Accept

You will have two options:

- 1) Pharmacy to Dose = Pharmacy will manage the patients warfarin during the hospitalization, which means being responsible for ordering doses & monitoring on a daily basis. You will see pharmacy chart notes. There will also be a MAR marker that states “pharmacy dosing warfarin” to remind you that pharmacy has this responsibility.
- 2) Provider to dose = Provider will be responsible for managing warfarin (dosing / monitoring) during the patient’s hospitalization.
