BULLETIN

## December 2022 News/Updates for Inpatient Providers

Detailed information for the following can be found on your Learning Home Dashboard ~ in the "What's New for Inpatient" section

- ## Inpatient Problem List Smartlinks

  When using Smartlinks to pull patient's problem list information into a note or note template/smartphrase, there are multiple smartlinks available for this functionality. Be sure you are using the smartlink you were intending.

- ## CHF Admission Order Update

  The CHF admission order set is being updated to address diuretic therapy, and each class of evidence-based medications. Providers will see target doses for each medication class as well as having the option to choose selecting a CHS formulary medication, documentation of continuing a patient's home medication, or describing a relative or absolute contraindication.
  (these changes to be available Dec 13)

- ## Lab Results Report

  Previously, the Lab Results tree viewer in the Chart Review Activity was to be changed where the Common Labs Results section was re-organized. However, after further review, it has been determined that this "Common Labs" section is duplicative, and unnecessary, as the same information is available throughout the other Lab Results sections. You are able to filter and view specific sections and results using the checkboxes to right of each section
  .

- ## New In Basket

  In Basket was updated during the November Epic Upgrade. It was a significant update with a lot of changes and new features and we feel important enough to reiterate here. Take a few minutes to review the tipsheet "New Tools in Your In Basket"
