

## November 2025 News/Updates for Inpatient Providers

- **Telemetry Ordering Update – *coming Dec 2***

The Telemetry Order Panel is being updated for clarity, consistency, and to ensure the appropriate reason is selected for the patient.

- **Urine Culture Order Accuracy**

When a patient has a Foley catheter in place, there is a specific urine culture order that should be used. The collection process for this order supports CAUTI protocol and helps minimize negative incidents.

- **Anatomy of the Cosmos Median Length of Stay**

November's Epic upgrade will include a "refresh" to EDD (estimated discharge date). Epic uses AI (artificial intelligence) to formulate the estimated LOS based on data in Cosmos and principal problem on admission and is updated consistently during the hospitalization.

- **AI Hospital Course Notes**

Drafting hospital course notes with the help of generative AI can help physicians more quickly summarize the admission so they can include that information in their discharge summaries.

- **Adding Insight columns to Patient list**

When an authorized GenAI user generates an insight summary on a patient, other users can view the summary from their patient list. See how to add the Insight summary columns to your patient list.

- **Nov 12 2025 ~ Epic Upgrade**

Epic Upgrade coming **November 12** - Learn about key new features available with What's New content. You should see a notification in your home workspace. Click **View** to review What's New. Or search for what's new in the search bar at the top of your Epic window.

***Detailed information for all the above can be found on your Learning Home Dashboard***
