

## April 2026 News/Updates for Inpatient Providers

- **Placing STAT Orders on Admit**

All STAT orders should be verbally communicated to the clinical team members (per CHS Policy CSC0057) ~ See the tipsheet for workflow and details.

- **Sending a Patient to Kenmore MRU**

When discharging a patient to the Medical Rehab Unit at Kenmore Mercy, if the “*Incomplete Discharge Readmit Reconciliation*” error populates, users will be unable to print the After Visit Summary.

- **Likelihood of Discharge Today or Tomorrow (April 28)**

An initiative to reduce length of hospital stay (LOS) for our CHS Inpatients is in progress. To better plan and facilitate the discharge process, this predictive score is shared with caregivers to begin the discharge planning process earlier.

- **End of Life Care Index (April 28)**

The End-of-Life predictive tool will allow Providers to identify patients who might benefit from an advanced care planning visit and triage possible palliative care needs. The predictive tool will be updated with medical record documentation. Hover over the Life Care Index on the Storyboard.

- **Epic Update coming May 13**

- **Epic efficiency tips**
