

August 2026 News/Updates for Inpatient Providers

- **Pre-operative Chest 2 Views X-ray**

To address reimbursement denials for preoperative chest X-rays, a new prompt has been added to all Outpatient 2-View Chest X-Ray orders to indicate whether the exam is being requested for preoperative evaluation.

- **CTA Heart Panel**

A panel specific to this workflow has been created for ease of ordering.

- **Radiology ~ Upcoming Changes**

Some additional Radiology Imaging orders will be moved or changed in the next month. See the Info sheet on the Learning Home Dashboard for these upcoming changes.

- **New Ordersets replacing old Ordersets**

For more accurate reporting and metrics, many ordersets are being standardized. You will receive a notification when first viewing your version of an orderset indicating that a change was made to the original orderset. You should remove your version and create a new version based on the new standard orderset.

Detailed information for all the above can be found on your Learning Home Dashboard
