

Coming Soon in Epic: Provider Nudges

A message from:

Victor Filadora, II, MD, MBA, Executive Vice President/Chief Physician Executive
Brandon Schulz-Koller, Director, Middle Revenue Cycle

This message is being shared with Catholic Health medical staff.

Starting Tuesday, October 13, Epic users will have access to **Provider Nudges**, a new documentation enhancement designed to help surface clinically relevant diagnoses and considerations while drafting patient notes.

How Do Provider Nudges Work?

Provider Nudges use **AI, machine learning**, and **rule-based logic** to identify information in the medical record that may support a new diagnosis or clinical consideration.

When criteria for a supported condition are met, a “Nudge” may appear while providers are drafting a patient note, giving the option to:

- Review supporting evidence from the chart
- Add the diagnosis to the problem list
- Modify the suggested diagnosis
- Address it later
- Dismiss the suggestion

Importantly, Nudges are designed to support documentation accuracy and completeness but **do not replace clinical judgment**. The decision to diagnose or document a condition remains with the provider.

Important: Diagnosis-Aware Notes (DAN) Required

Provider Nudges will only appear for providers using **Diagnosis-Aware Notes (DAN)** in their documentation workflow.

This functionality is available when using:

- .PROBPOC
- .DIAGPOC

If you do not currently use Diagnosis-Aware Notes, review this **Diagnosis-Aware Notes (DAN) tip sheet** to learn more about incorporating DAN into your workflow.

Why This Enhancement Matters

Provider Nudges bring potential conditions to your attention when supporting evidence exists in the chart, helping to support:

- More specific documentation
- Improved visibility of clinically relevant diagnoses
- Comprehensive reflection of patient complexity and severity of illness

For additional guidance on using **Provider Nudges**, review the **Epic tip sheet** below.

What to Expect?

Effective next Tuesday, Provider Nudges will be available for the following conditions:

- **Malnutrition**
- **Hypokalemia**
- **Hypomagnesemia**

For screenshots and related criteria for these Nudges, review the **job aid** below.

Looking Ahead

This initial rollout introduces a focused set of Provider Nudges to help providers become familiar with the new feature. As adoption grows, new diagnostic categories may be added.

Thank you for your partnership as we continue to optimize Epic workflows and support the important work you do every day for our patients.
